# Genetic Relationships 

LRS

CGIL
July-Aug 2012

## Pedigrees

Step 1. Chronological Order

| Animal | Sire | Dam | Generation Number |
| :---: | :---: | :---: | :--- |
| BF | DD | HE | 1 |
| DD | GA | EC | 1 |
| GA |  |  | 1 |
| EC | GA | FB | 1 |
| FB |  |  | 1 |
| AG | BF | EC | 1 |
| HE | DD | FB | 1 |

## Pedigrees

Step 1. Chronological Order

| Animal | Sire | Dam | Generation Number |
| :---: | :---: | :---: | :--- |
| BF | DD | HE | 1 |
| DD | GA | EC | 1 |
| GA |  |  | 1 |
| EC | GA | FB | 1 |
| FB |  |  | 1 |
| AG | BF | EC | 1 |
| HE | DD | FB | 1 |
| 2 |  |  |  |

## Pedigrees

Step 1. Chronological Order

| Animal | Sire | Dam | Generation Number |
| :---: | :---: | :---: | :--- |
| BF | DD | HE | 1 |
| DD | GA | EC | 1 |
| 2 |  |  |  |
| GA |  |  | 1 |
| 3 |  |  |  |
| EC | GA | FB | 1 |
| FB |  |  | 1 |
| AG | BF | EC | 1 |
| HE | DD | FB | 1 |
| 2 |  |  |  |

## Pedigrees

Step 1. Chronological Order

| Animal | Sire | Dam | Generation Number |
| :---: | :---: | :---: | :--- |
| BF | DD | HE | 1 |
| DD | GA | EC | 1 |
| 2 |  |  |  |

| 4 |  |  |  |
| EC | GA | FB | 1 |
| FB |  |  | 1 |
| AG | BF | EC | 1 |
| AE | DD | FB | 1 |

## Pedigrees

Step 1. Chronological Order

| Animal | Sire | Dam | Generation Number |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| BF | DD | HE | 1 | 2 | 2 |
| DD | GA | EC | 1 | 3 | 4 |
| GA |  |  | 1 | 4 | 5 |
| EC | GA | FB | 1 | 3 | 4 |
| FB |  |  | 1 | 4 | 5 |
| AG | BF | EC | 1 | 1 | 1 |
| HE | DD | FB | 1 | 2 | 3 |

## Pedigrees

Step 1. Chronological Order

| Animal | Sire | Dam | Generation Number |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| BF | DD | HE | 1 | 2 | 2 | 2 |
| DD | GA | EC | 1 | 3 | 4 | 4 |
| GA |  |  | 1 | 4 | 5 | 6 |
| EC | GA | FB | 1 | 3 | 4 | 5 |
| FB |  |  | 1 | 4 | 5 | 6 |
| AG | BF | EC | 1 | 1 | 1 | 1 |
| HE | DD | FB | 1 | 2 | 3 | 3 |

## Pedigrees

Step 2. Sort in order

| Animal | Sire | Dam | Generation Number |
| :---: | :---: | :---: | :---: |
| GA |  |  | 6 |
| FB |  |  | 6 |
| EC | GA | FB | 5 |
| DD | GA | EC | 4 |
| HE | DD | FB | 3 |
| BF | DD | HE | 2 |
| AG | BF | EC | 1 |

```
border=function(anm,sir,dam){
maxloop=1000
changes = 1
count = 0
mam=length(anm)
old = rep(1,mam)
new = old
while(changes>0){
for (j in 1:mam){
    ks = sir[j]
    kd = dam[j]
    gen = new[j]+1
    if(ks != "NA"){
    js = match(ks,anm)
    if(gen > new[js]){new[js] = gen}
    }
```

```
            if(kd != "NA"){
    jd = match(kd,anm)
    if(gen > new[jd]){new[jd] = gen}
    }
    } # for loop
    changes = sum(new - old)
    old = new
    count = count + 1
    if(count > maxloop){changes=0}
    } # while loop
return(new)
    } # function loop
```

## Usage

```
animal=c("bf", "dd", "ga", "ec", "fb", "ag", "he")
sire=c("dd", "ga", "NA", "ga", "NA", "bf", "dd")
dams=c("he","ec", "NA", "fb","NA", "ec", "fb")
gg=border(animal,sire,dams)
    ka = order(-gg)
    oanm=animal[ka]
    osir=sire[ka]
    odam=dams[ka]
    cbind(oanm,osir,odam)
```

## Tabular Method

Wright's Coefficient of Relationship

$$
w_{i j}=\frac{\operatorname{Cov}\left(a_{i}, a_{j}\right)}{\left(\operatorname{Var}\left(a_{i}\right) \operatorname{Var}\left(a_{j}\right)\right)^{5}}
$$

$\operatorname{Cov}\left(a_{i}, a_{j}\right)$ from 0 to 2 , numerator relationship.
$\operatorname{Var}\left(a_{i}\right)$ from 1 to 2
$w_{i j}$ from 0 to 1
Coefficient of $\operatorname{Kinship}=\frac{1}{2} \operatorname{Cov}\left(a_{i}, a_{j}\right)$, used in plant breeding. Henderson presented Tabular Method to get $\operatorname{Cov}\left(a_{i}, a_{j}\right)$

Tabular Method

## Activity

- Add KK with parents GA and HE
- Apply Tabular Method
- Calculate $w_{G A, K K}$
- Use R function to verify

## Inverse of A

- A has order equal to number of animals
- Direct inverse not practical
- Henderson(1975) major discovery

Discovery

$$
\begin{aligned}
\mathbf{A} & =\left(\begin{array}{rrr}
1 & 0 & \frac{1}{2} \\
0 & 1 & \frac{1}{2} \\

.5 & .5 & -1 \\
-1 & -1 & 2
\end{array}\right) \\
& =\left(\begin{array}{rrr}
1.5 & .5 & -1 \\
.5 & 1.5 & -1 \\
-1 & -1 & 2
\end{array}\right)
\end{aligned}
$$

Inverse of $\mathbf{A}$ can be written from list of pedigrees and $\mathbf{B}_{i i}^{-1}$ values. For inbred animals $b_{i i}$ is less than 0.5. Meuwissen and Luo (1996) method for determining inbreeding.

$$
b_{i i}=\left(0.50-0.25 \times\left(F_{s}+F_{d}\right)\right)
$$

$F_{s}, F_{d}$ are inbreeding coefficients of sire and dam of animal $i$.

## Meuwissen and Luo Method

- Process animals in chronological order
- Find a row of $\mathbf{T}$ for animal $i$
- Find diagonal of $\mathbf{B}$ for animal $i$
- Multiply to find diagonal of $\mathbf{A}$
- Subtract 1 to get $F_{i}$

## Earlier Example

| Animal | Sire | Dam | $F_{i}$ | $b_{i i}$ |
| :---: | :---: | :---: | ---: | ---: |
| GA |  |  | 0 | 1 |
| FB |  |  | 0 | 1 |
| EC | GA | FB | 0 | $1 / 2$ |
| DD | GA | EC |  |  |

| ID vector | T-row | $b_{i}$ |
| :--- | :--- | :--- |
| DD | 1 | $(.5-.25(0+0))=1 / 2$ |
| GA | .5 | 1 |
| EC | .5 | $1 / 2$ |
| GA | .25 | 1 |
| FB | .25 | 1 |

## Example continued

| ID vector | T-row | $b_{i}$ |
| :--- | :--- | :--- |
| DD | 1 | $(.5-.25(0+0))=1 / 2$ |
| GA | $.5+.25$ | 1 |
| EC | .5 | $1 / 2$ |
| FB | .25 | 1 |

$$
\begin{aligned}
a_{D D} & =1^{2}(1 / 2)+(3 / 4)^{2}(1)+(1 / 2)^{2}(1 / 2)+(1 / 4)^{2}(1) \\
& =(8+9+2+1) / 16 \\
& =1+(1 / 4) \\
F_{D D} & =1 / 4
\end{aligned}
$$

Next animal, HE

| ID vector | T-row | $b_{i}$ |
| :--- | :--- | :--- |
| HE | 1 | $(.5-.25(.25+0))=7 / 16$ |
| DD | .5 | $1 / 2$ |
| FB | .5 | 1 |
| GA | .25 | 1 |
| EC | .25 | $1 / 2$ |
| GA | .125 | 1 |
| FB | .125 | 1 |

## Next animal, HE

| ID vector | T-row | $b_{i}$ |
| :--- | :--- | :--- |
| HE | 1 | $7 / 16$ |
| DD | .5 | $1 / 2$ |
| FB | $5 / 8$ | 1 |
| GA | $3 / 8$ | 1 |
| EC | .25 | $1 / 2$ |

$$
\begin{aligned}
a_{H E} & =1^{2}(7 / 16)+(1 / 2)^{2}(1 / 2)+(5 / 8)^{2}(1)+(3 / 8)^{2}(1)+(1 / 4)^{2}(1 / 2) \\
& =(28+8+25+9+2) / 64 \\
& =1+(1 / 8) \\
F_{H E} & =1 / 8
\end{aligned}
$$

## Earlier Example

| Animal | Sire | Dam | $F_{i}$ | $b_{i i}$ |
| :---: | :---: | :---: | ---: | ---: |
| GA |  |  | 0 | 1 |
| FB |  |  | 0 | 1 |
| EC | GA | FB | 0 | $1 / 2$ |
| DD | GA | EC | $1 / 4$ | $1 / 2$ |
| HE | DD | FB | $1 / 8$ | $7 / 16$ |
| BF | DD | HE | $3 / 8$ | $13 / 32$ |
| AG | BF | EC | $11 / 32$ | $13 / 32$ |

## Writing $\mathbf{A}^{-1}$

## Henderson's Rules

Let $\delta=1 / b_{i i}$, then add

|  | Animal | $\underline{\text { Sire }}$ | $\underline{\text { Dam }}$ |
| :--- | ---: | ---: | ---: |
| Animal | $\delta$ | $-.5 \delta$ | $-.5 \delta$ |
| Sire | $-.5 \delta$ | $.25 \delta$ | $.25 \delta$ |
| Dam | $-.5 \delta$ | $.25 \delta$ | $.25 \delta$ |

## Writing $\mathbf{A}^{-1}$

|  | ,--- | ,-- | GA,FB | GA,EC |  |  |  |

## Bill's Routines

C language routines "wrapped" into R functions.

```
xpdinit(nam) # initialize pedigree
xpdadd(sire,dam) # add a new animal
xpdd(animal) # returns bi value
xpdf(animal) # returns f value
xpdfree() # frees up memory after
all inbreeding computed
```

zzlib = file.choose() \# find rclib.dll
dyn.load(zzlib)
zbill = file.choose() \# find Bills.R
source(zbill)

## Compute Inbreeding

```
animals numbered in chronological order, 1 to nam
sid \# a string of sire numbers, 1 to nam
did \# a string of dam numbers, 1 to nam
xpdint(nam) \# initialize functions
inbc \(=\operatorname{rep}(0, n a m)\)
inbb \(=\operatorname{rep}(0, n a m)\)
for (i in 1:nam) \{
    inbc[i] = xpdadd(sid[i],did[i])
    inbb[i] = xpdd(i)
    \}
```

## A-inverse Function

$$
\text { AI }=\text { AINV (sid,did,inbb) }
$$

$$
\begin{aligned}
& \text { AINV }=\text { function(sid,did,bi) \{ } \\
& \text { rules }=\text { matrix }(\text { data }=c(1,-.5,-.5,-.5,0.25,0.25,-.5, .25, .2 \text { ! } \\
& \text { byrow=TRUE, nrow=3) } \\
& \text { nam }=\text { length(sid); } n p=n a m+1 \\
& \text { ss = sid+1; dd = did + } 1 \\
& \text { LAI = matrix (data=c (0), nrow=np, ncol=np) } \\
& \text { for ( i in 1:nam) \{ } \\
& i p=i+1 ; \quad X=1 / b i[i] \\
& \mathrm{k}=\mathrm{cbind}(\mathrm{ip}, \mathrm{ss}[\mathrm{i}], \mathrm{dd}[\mathrm{i}]) \\
& \operatorname{LAI}[k, k]=\operatorname{LAI}[k, k]+r u l e s * X \\
& \text { \} } \\
& \mathrm{k}=\mathrm{c}(2: \mathrm{np}) ; \quad \mathrm{C}=\operatorname{LAI}[\mathrm{k}, \mathrm{k}] \\
& \text { return (C) \} }
\end{aligned}
$$

## Sire-MGS Relationships

What would be the rules if

$$
\mathbf{A}=\left(\begin{array}{ccc}
1 & 0 & \frac{1}{2} \\
0 & 1 & \frac{1}{4} \\
\frac{1}{2} & \frac{1}{4} & 1
\end{array}\right)
$$

- Apply Cholesky decomposition
- Form $\mathbf{T D}^{2} \mathbf{T}^{\prime}$
- Invert T
- Deduce the rules. Try it.

## Sire-MGS

## Henderson's Rules

Let $\delta=16 / 11$, then if both ancestors known add

|  | $\underline{\text { Animal }}$ | $\underline{\text { Sire }}$ | $\underline{\text { MGS }}$ |
| :--- | ---: | ---: | ---: |
| Animal | $\delta$ | $-.5 \delta$ | $-.25 \delta$ |
| Sire | $-.5 \delta$ | $.25 \delta$ | $.125 \delta$ |
| MGS | $-.25 \delta$ | $.125 \delta$ | $.0625 \delta$ |

If MGS unknown, $\delta=4 / 3$.
If Sire unknown, $\delta=16 / 15$.

## Sire Models

$$
y_{i j k \ldots}=\text { Fixed }+ \text { Random }+s_{k}+e_{i j k \ldots} \ldots
$$

- Genetic part through sire, records on progeny, half-sibs.
- Each progeny assumed to have one record, first lactations.
- Each progeny from a different, random dam, equal genetic quality.
- Progeny distributed randomly across other effects in the model.
- Sire estimates were Transmitting Abilities, ETA.
- Sires related, A based on Sire-MGS relationships, no inbreeding.
- 1970's

## Sire-MGS Models

$$
y_{i j k \ldots}=\text { Fixed }+ \text { Random }+s_{k}+.5 s_{l}+e_{i j k \ldots}
$$

- Dams assumed to be random female progeny of the MGS.
- All progeny of a sire are half-sibs.
- One record per progeny.
- One progeny per dam, dams from different genetic levels as indicated by MGS.
- ETA obtained.
- A based on Sire-MGS relationships, no inbreeding.
- Progeny distributed randomly across other effects in the model.

## Sire-Dam Models

$$
y_{i j k \ldots}=\text { Fixed }+ \text { Random }+s_{k}+d_{l}+e_{i j k \ldots}
$$

- Dams can have more than one progeny, full-sibs allowed.
- Dams can have different genetic potential.
- Dams not randomly mated to sires.
- Dams can be mated to different sires.
- Dam effects might include maternal effects.
- One record per progeny.
- ETA obtained.
- Progeny distributed randomly across other effects in the model.
- A may be based on Sire-Dam relationships or Sire-MGS relationships, no inbreeding.

## Animal Models

$$
y_{i j k \ldots}=\text { Fixed }+ \text { Random }+a_{k}+p e_{l}+e_{i j k \ldots}
$$

- One or more records per animal, but all animals must have a first record.
- PE effects if more than one record included.
- A based on Sires-Dams, takes into account non-random matings, all additive relationships and inbreeding.
- Animals are random progeny from sire-dam matings, i.e. not selected.
- Animals distributed randomly among other factors in the model.
- EBV obtained, the combined additive effect of all loci in the genome.
